# BALED EXCELSIOR

Baled Excelsior, is an eco-friendly, 100% biodegradable product manufactured from sustainably sourced Great Lakes Aspen. Our process transforms these aspen fibers into uniquely curled strands with barbed edges, offering an unparalleled interlocking feature. This design ensures versatility across a plethora of applications, including construction, filtration, evaporative cooling, casket bedding, packaging, cushioning, and more, making it an essential component in industries ranging from archery to arts and crafts.

Excelsior, also known globally as wood wool, stands out for its thin, narrow, and resilient fibers. These characteristics not only allow it to maintain its shape and support after compression but also enhance its suitability for a wide array of uses. Our excelsior fibers are available in more than 50 cuts, tailored to meet even the most specific needs. Available in both 75-pound and 55-pound pony bales, we offer compressed bales for efficiency and convenience, with options for custom-length bales to suit every requirement.

At the heart of our product is our commitment to environmental stewardship. As a renewable resource, Aspen allows us to provide a safe, effective, and environmentally responsible solution to our customers. Choose Baled Excelsior for your needs and experience the perfect blend of nature's ingenuity and practical versatility.

## APPLICATIONS

- Packaging & Cushioning
- Animal Enrichment
- Casket Bedding
- Filtration
- Crafts
- Archery Targets
- Erosion and Sediment Control
- Gift and Floral Arrangements & More!

\*Weight is based on a dry fiber weight basis at time of manufacture. Baseline moisture content of Great Lakes Aspen excelsior is 22%.
